**Dear Hiring Manager,**

I am sending my resume in response to your job posting for the Associate Software Engineer position. I am a recent Computer Science graduate from the University of Tulsa (TU) with an ambitious academic career and a history making creative projects. I am proficient in Java with 6 years of active experience through academics and personal projects.

Through my academic career, I have solidified my Java skills from many different angles. For my Networks project, I developed a two-way asynchronous talking server using Java Sockets. In Computer Graphics, I used Java OpenGL to create a navigable 3D environment with textured and lighted objects. My Game Development class had me create my most ambitious project, which was a fully playable 2D game with Java.

As a research assistant, I collaborated with a professor at The University of Tulsa to write a paper entitled "Remote Pair-Programming in Online CS Education: Investigating Through a Gender Lens", which was presented at the VL/HCC 2019 conference. This opportunity provided me with exposure to analyzing data methodically and recognizing patterns, cautiously proofreading academic writing, and doing research to compile relevant evidence.

About me, I am a self-motivated team player who can accomplish tasks independently. I am ambitious with my work and acutely organized. I believe with my academic achievements, entrepreneurial spirit, and team-oriented mindset, I would excel in this position. I am excited to form new skills and develop improvements to Accruent's software solutions.

Sincerely,
